More than the sum of its parts PLATFORM

More than the sum of its parts - a platform for the visibility of research staff

The new platform will allow researchers to showcase their work, share their expertise and connect with other researchers in the field. It will also provide a central hub for information on research projects, funding opportunities and more.

It is a great way to showcase your work and connect with other researchers in the field. It will also provide a central hub for information on research projects, funding opportunities and more.

More than the sum of its parts - a platform for the visibility of research staff

The new platform will allow researchers to showcase their work, share their expertise and connect with other researchers in the field. It will also provide a central hub for information on research projects, funding opportunities and more.

EIP-AGRI Focus Group Benefits of landscape features for arable crop production

FINAL REPORT 7 MARCH 2016

Reducing livestock emissions

Methods farmers can use to reduce cattle livestock emissions in a cost-effective way

Livestock production contributes significantly to greenhouse gas (GHG) emissions. The EIP-AGRI Focus Group is working to identify and test cost-effective measures to reduce livestock emissions.

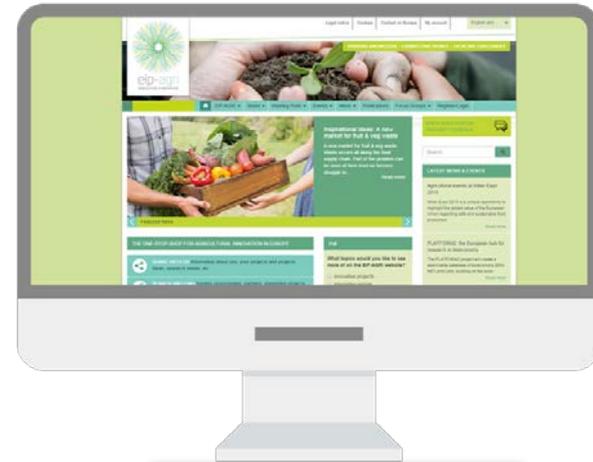

Horizon 2020 multi-actor projects

Soil organic matter matters

Investing in soil quality for long-term benefits

Shaping the digital (r)evolution in agriculture

How can we make it easier for producers to access different agricultural services?
